

Before the Budget !

This House believes CDC is
better than ~~current~~ DC for both
employers and employees

In favour of CDC

Kevin Wesbroom

Senior Partner, Aon Hewitt

Collective DC (CDC) plans

(the ones without guarantees)

- ❑ The employer pays a fixed contribution rate
 - Rate could be a range
 - In our view employers will not tolerate pension risk
- ❑ No individual accounts
 - Investment done by independent trustees, with professional advice
- ❑ The member gets a DB-like Target pension
 - Pension paid from the plan, not annuity purchase
 - Revaluation and indexation to preserve real value
 - Expected benefit level facilitates retirement planning
- ❑ We “square the circle” because the Target Pension is not guaranteed
 - Indexation and revaluation is not guaranteed
 - Even the basic pension is not guaranteed in extremis
 - Benefits adjusted to ensure cost stays constant
 - Plan would have strict rules on how to get back into balance – benefit adjustments or bonus additions

CDC Issues

THE GOOD

- Bigger pensions
- More stability
- Pensions not accounts
- No annuities
- No member investment
- Lower charges?
- Better returns?

THE BAD

- Risk Sharing?
- Been Here Before?
- “Soft” guarantees
- Cross – subsidies
- Complexity
- Lack of choice
- The need for scale
- Run off schemes

THE UGLY

- DB in waiting
- With Profits?
- Benefit cuts

The Good – Bigger, More Stable Outcomes

Aon Hewitt Modelling - Projected outcomes

More helpful for planning?

Our modelling - what's not included!

- ❑ Lower charges for CDC vs DC
 - Can get economies of scale from DC
 - But many don't!
- ❑ No out performance of CDC vs DC
 - Can get (most) best ideas in DC
 - But many don't!
- ❑ Out-performance?
 - Best ideas into DC portfolios?
 - Illiquids and daily pricing
 - Member led inertia?
- ❑ The Weakness of DC is the member!
 - Unwilling and unable to take the required investment decisions*
 - Have no idea how much to save – partly because of uncertainty

* Eg Byrne, A.; 2007, *Employee Saving and Investment Decisions in Defined Contribution Pension Plans: Survey Evidence from the UK*, Financial Services Review, Vol. 16, No. 1.

Good Things - No annuity purchase

- ❑ Annuities are bad long-term
- ❑ Annuities are bad short-term
- ❑ Dealing with longevity
 - Quicker with trustees
 - Better diversification

How has this changed post Budget? Will people still need an income in retirement?

Not Giving In ...

Issue	Resolution
Employer Concerns of Regulatory Creep	Explicit legislative reference Big Red Button in deed 
Communicating with members	Regular focused communication Raised public awareness Communicating the uncertain future
The W Word - with profits	Actuaries roll over?? Public disclosure through CDC Website
Cuts in Benefits	Look at likelihood and severity Public tolerance – within limits Let's understand the Netherlands Systems break under extreme pressure

Historic modelling - bonuses added

We are not alone

The Canadian Vision

We define a **sustainable pension plan** as one that can consistently deliver, through both favourable and adverse circumstances, an **appropriate range of benefits** within an **acceptable range of costs** over the long-term.

A sustainable approach to pensions will allow a pension plan to adjust both costs and benefits in response to actual experience, with the key objective that adjustments be infrequent and low in magnitude.

The UK Vision – and Your Role

- ❑ The Politics of CDC changing legislation – and elections
- ❑ What do actuaries want to be remembered for in this debate?
- ❑ Do we have a Plan B?

- ❑ More public awareness raising needed

- ❑ CDC from DB or from DC (10 years too soon or 10 years too late?)

- ❑ Where will CDC flourish?
 - Large, unionised employers?
 - Industry wide arrangements
 - Ready made solutions – provider led master trusts

All we are saying

le mieux est l'ennemi du bien (Voltaire)
